

Hamid Nuh

AI Automation & n8n Specialist | Agents, APIs & Prompt Engineering

Lahore, Pakistan | Remote | mr@hamidnuh.com | Phone/WhatsApp: +92 314 4125292 | GitHub: github.com/hamidnuh

Portfolio: hamidnuh.com/portfolio | Focus: AI Automation | Applied AI & Agents | DevOps | LinkedIn: linkedin.com/in/hamidnuh

PROFESSIONAL SUMMARY

AI Automation and n8n Specialist with 1+ year of intensive production automation experience and nearly 5 years across digital systems. Built 100+ n8n workflows and 10+ connected systems for real business use, including AI agents, content and CMS automation, API integrations, monitoring, lead handling, and marketing operations. Strong in prompt engineering, structured outputs, REST APIs, webhooks, validation, retries, human-in-the-loop workflows, Docker, Linux, and cost-aware LLM/API usage. Solution-oriented builder focused on reliable systems, root-cause diagnosis, maintainability, and business value.

TECHNICAL SKILLS

AI Automation & n8n: n8n, AI Automation, AI Agents, Agentic Workflows, LLM Integration, Workflow Orchestration, Trigger-Based Automation, Branching Logic, Human-in-the-Loop Workflows

Prompt Engineering: System Prompts, Developer Prompts, Prompt Templates, Prompt Chaining, Structured Prompt Design, Structured Outputs, JSON Output Prompting, Function Calling, Tool Use, Context Management, Hallucination Reduction

APIs & Integrations: REST APIs, Webhooks, HTTP, JSON, API Integration, Authentication, Pagination, Rate Limits, API Testing, WordPress REST API

Reliability & Governance: Input Validation, Output Validation, Schema Validation, Retry and Fallback Logic, Logging, QA Gates, Approval Workflows, Cost and Usage Control, Production Readiness, Documentation

Infrastructure & Data: Docker, Docker Compose, Linux, Ubuntu, Raspberry Pi, Cloudflare Tunnel, PostgreSQL, Supabase, Git, GitHub, Monitoring, Troubleshooting

Web & CMS Systems: WordPress, Gutenberg, WooCommerce, Next.js, Node.js, JavaScript, PHP, SEO Content Systems, CMS Automation

PROFESSIONAL EXPERIENCE

Founder - Freelance AI Automation Systems Builder

GFX Hawker | Freelance | Remote | Pakistan | 2024 - Present

- Engineered and maintained 100+ n8n workflows and 10+ connected systems across content operations, WordPress publishing, lead handling, marketing workflows, monitoring, AI generation, and internal business processes.
- Designed multi-workflow architecture using REST APIs, webhooks, structured JSON, validation gates, approval steps, logging, retries, branching logic, and human review.
- Built AI agent and LLM-assisted workflows using prompt engineering, tool and function logic, structured outputs, context management, output validation, and cost-aware API usage.
- Built web systems and integrations using WordPress, Next.js, Node.js, Supabase, PostgreSQL, APIs, and automation-connected application patterns.
- Deployed self-hosted automation infrastructure using n8n, Docker, Raspberry Pi, Linux, private networking, and Cloudflare Tunnel.
- Translated business requirements into practical technical solutions, diagnosed root causes, documented important decisions, and improved reliability without unnecessary complexity.

Co-Founder - Web, SEO and Automation Operations

GFX Printer | Lahore, Pakistan | July 2022 - July 2026

- Built and managed WordPress websites, service pages, landing pages, SEO structures, content systems, and ongoing website operations for a printing, branding, and marketing business.
- Applied AI-assisted content workflows, automation, analytics, digital marketing, and technical troubleshooting to support business operations and content production.
- Supported SEO, technical SEO, Google and Meta advertising, website improvements, and reporting while keeping technical delivery aligned with commercial goals.

Digital Marketing Manager

Media Print UAE | Remote | Dubai, United Arab Emirates | September 2021 - July 2026

- Managed SEO, website improvements, content systems, analytics, digital marketing, automation, and AI-assisted content operations for a UAE printing business.
- From July 2022 onward, also supported WordPress website operations alongside repeatable SEO content and publishing workflows.
- Worked directly with business stakeholders to connect marketing activity with website, automation, content, and operational goals.

SELECTED TECHNICAL PROJECTS

n8n Multi-Workflow Automation Systems

Built connected automation systems where separate workflows handle AI content, SEO, WordPress publishing, social operations, advertising support, monitoring, lead events, and internal processes. Designed clear workflow boundaries with validation, retries, logging, approvals, human review, and maintainable orchestration.

Technologies: n8n, REST APIs, Webhooks, JSON, AI APIs, PostgreSQL, Docker

AI Agents, Prompt Engineering and Structured Output Systems

Built LLM-assisted workflows that use system and developer prompts, tool/function logic, structured JSON outputs, context controls, validation, repair paths, approval gates, and cost-aware model/API routing for practical business automation.

Technologies: AI Agents, Prompt Engineering, Structured Outputs, JSON Schema, Function Calling, LLM APIs, n8n

REST API, Webhook and Systems Integration

Connected websites, automation platforms, web applications, AI systems, WordPress, and external services using APIs and event-driven workflows. Worked with authentication, pagination, rate limits, validation, retries, structured data exchange, and reliable integration behavior.

Technologies: REST APIs, HTTP, JSON, Webhooks, API Integration, n8n, JavaScript

Self-Hosted Automation and Production Infrastructure

Set up an always-on Raspberry Pi 5 automation environment so scheduled jobs, webhooks, and background workflows do not depend on a primary workstation. Used containerized services, Linux administration, secure remote access, and local AI tooling for practical self-hosting.

Technologies: Raspberry Pi 5, Linux, Docker, Docker Compose, n8n, PostgreSQL, SSH, Cloudflare Tunnel

WordPress and CMS Automation

Built WordPress automation workflows for page and content planning, REST publishing, metadata handling, custom fields, content validation, SEO content operations, and repeatable CMS workflows.

Technologies: WordPress, WordPress REST API, WooCommerce, n8n, JSON, PHP, SEO

ADDITIONAL EXPERTISE

Web Application Experience: Next.js, Node.js, React, TypeScript, Supabase, PostgreSQL, authenticated application patterns, dashboards, roles and permissions, API-backed state

Security Awareness: Access control, credential handling, sensitive data handling, prompt injection awareness, safer API and automation design, reduced exposure, human review

Business & Growth Context: SEO, Technical SEO, digital marketing, Google Ads, Meta Ads, analytics, content operations, copywriting, creative production

WORK STYLE

Solution-oriented automation builder who turns unclear business processes into scoped workflows, integrations, prompts, agents, and operating systems. Comfortable diagnosing root causes, documenting workflow logic, explaining trade-offs, and balancing reliability, cost, speed, model quality, maintainability, and return on invested time and money.
